Title

AC system, a quasi-steady state model of a DC transmission system under an unsymmetrical fault in the, 293
An interactive dynamic state estimation and bad data processing, 70
Analysis and damping of subsynchronous oscillations in AC-HVDC power systems, 26
Branch cutting and node tearing, unified piecewise solution of power system networks combining both, 283
Computational analysis of adjoint network-based methods applied to contingency evaluation, 54
Computational analysis of network-based methods applied to contingency evaluation, 123
Construction of improved Lyapunov functions and extension of transient stability regions for power systems, 65
Contingency evaluation by adjoint network based methods, sensitivity analysis and, 57
Data processing, an interactive dynamic state estimation and bad, 67
Decision making under uncertainty in seasonal operations planning, 170
Distribution system operation, interactive modelling of transferable load facilities in, 267
Dynamic security assessment of power systems using structure-preserving energy functions, 39
Economic operation of power systems, a novel technique to estimate the fuel cost functions for, 109
Electromagnetic unbalances of six phase transmission lines. Part I, 78
Emergency control in the UPG of the USSR, general philosophy of, 19
Energy functions, direct stability evaluation of power systems with detailed generator models using structure preserving, 47
Energy functions, dynamic security assessment of power systems using structure-preserving, 36
Extended equal area criterion: an analytical ultra-fast method for transient stability assessment and preventive control of power systems, 131
Forecasting and operational planning for control automization, improvement of electric power systems load, 218
Generator, reduced order modelling of high voltage oscillatory impulse, 94
Hydro-dominated power production system, scheduling methods in operation planning of a, 189
Hydro-thermal power systems, short-term resource scheduling in multi-area, 200
Hydroelectric systems, optimal stochastic operations scheduling of large, 161
Hydroelectric units, cost and reliability evaluation for power systems with multiple energy limited, 99
Improvement of electric power systems load forecasting and operational planning for control automization, 218
Large scale nonlinear programming applied to operations planning, 213
Load facilities in distribution system operation, interactive modelling of transferable, 267
Lossy magnetic energy storage units for improvement in automatic generation control, 248
Lyapunov functions and extension of transient stability regions for power systems, construction of improved, 62
Methodologies in medium-long term operations planning, 176
Network-based methods applied to contingency evaluation, computational analysis of adjoint, 54
Operation planning of a hydro-dominated power production system, scheduling methods in, 189
Operation planning, decision support system–, 155
Operational planning for control automization, improvement of electric power systems load forecasting and, 218
Operations planning, decision making under uncertainty in seasonal, 170
Optimal load flow using a combined quasi-newton and conjugate gradient technique, stochastic, 85
Optimal power rescheduling for system security using stochastic second-order load flow, 277
Optimal stochastic operations scheduling of large hydroelectric systems, 161
Oscillations in AC-HVDC power stations, analysis and damping of subsynchronous, 26
Power systems reliability evaluation, random perturbation of transfer capability and its effect on, 253
Power stations, analysis and damping of subsynchronous oscillations in AC-HVDC, 26
Power stations, transient stability analysis for symmetrical and unsymmetrical faults in mixed three-phase and six-phase, 9
Power system networks combining both branchy cutting and node tearing, unified piecewise solution of, 283
Power system operation, new techniques for secure, 226
Power systems using structure-preserving energy functions, dynamic security assessment of, 36
Power systems with detailed generator models using structure preserving energy functions, direct stability evaluation of, 47
Power systems, effects of load modelling on the behaviour of, 289
Power systems, a new approach to the analysis of mixed three-phase and six-phase, 115
Power systems, a novel technique to estimate the fuel cost functions for economic operation of, 109
Preventive control of power systems, extended equal area criterion: an analytical ultra-fast method for transient stability assessment and, 131
Random perturbation of transfer capability and its effect on power systems reliability evaluation, 253
Reduced order modelling of high voltage oscillatory impulse generator, 94
Reliability valuation, random perturbation of transfer capability and its effect on power systems, 253
Scheduling methods in operation planning of a hydro-dominated power production system, 189
Self-tuning control of thermal power plants, 2
Sensitivity analysis and contingency evaluation by adjoint network based methods, 57
Stochastic optimal load flow using a combined quasi-newton and conjugate gradient technique, 85
Synchronous machine block diagram analysis with fast dynamics, 239
Transient stability analysis for symmetrical and unsymmetrical faults in mixed three-phase and six-phase power stations, 9
Transient stability assessment and preventive control of power systems, extended equal area criterion: an analytical ultra-fast method for, 131
